The present invention describes compositions (C) comprising: (a) a first agent (a1) that prevents or treats amyloid-beta related disease; and (b) a second agent (a2) that is: (i) a peptide or peptidomimetic that a second agent (a2) that is: (i) a peptide or peptidomimetic that a second agent (a2) that is: (i) a peptide or peptidomimetic that conditions anyloid-beta fibril formation, or therapeutic immune response against amyloid-beta dibril formation, or (ii) an immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have noortopic, neuroprotective, networking (C). (C) have not condition antidopressant, endocrime and hypnotic activities, or propertic, anticonvulsant, antidopressant, endocrime and hypnotic activities, and can be used as amyloid-beta fibril formation modulators, and a myloid-beta related disease (g) Alzheimer's disease (including sporadic or member system modulators. (C) can be used for preventing or treating an amyloid-beta related disease (g). Mill ampliation or according in the secretary or familial (hereditary), mild cognitive impairment, mild-to-moderate cognitive impairment, vascular dementia, cerebral myloid angiopathy, hereditary cerebral haemorrhage, senile dementia, anyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, condition associated with Alzheimer's disease (androxerophic lateral sclerosis, acquired immunodeficiency, assular disease, amycrophic lateral sclerosis, acquired immunodeficiency, assular disease, anycrophic lateral sclerosis, acquired immunodeficiency, assular disease, anycrophic lateral sclerosis, acquired immunodeficiency, assular disease, anycrophic accordination, gardice, related muscle tone, seizures, sensory loss, variation, approxibation, described any passor and passor and any passor and passor and any passor and passor and any disease, any continuation, gardice and apposite, verial disease, any continuation, gardid accordination, sexal disease, any continuation, sexal disease, 
                                 Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes compositions (C) comprising: (a) a first agent (al) that prevents or treats amyloid-beta related disease; and (b) as second agent (a2) that is: (i) a peptide or peptidomimetic that modulates amyloid-beta fibril formation or induces a prophylactic or therapeutic immune response against amyloid-beta fibril formation; or (ii) an immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C): (C) have nootropic, neuroprotective, cerebroprotective, hemostatic, ophthalmological, antithyroid, vasotropic, cardiovascular, tranquilliser,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cerebrovascular disease, cardiovascular disease, memory loss, anxiety, behavioural dysfunction, neurological condition, psychological condition,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to three new peptides which block the amnestic effects of amyloid beta protein and which can be used to ameliorate amnesia and other neurotoxicity in Alzheimer's disease caused by deposition of this protein. The peptides themselves are not amnestic or memory-enhancing. The new peptides are described in AAR87912, AAR87913 and AAR87914. The present sequence is an additional peptide tested in the process but found not to be active
                                                                                                   The peptide AAR88300 corresponds to residues 16-22 of beta-A4 was designed as a potential memory enhancing peptide but was found not to be amnestic. (Amnestic peptides are memory-enhancing at lower concentrations than those at which they cause amnesia)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New peptide(s) which block binding of amyloid beta protein - used for antagonising the amnestic effects of amyloid beta protein, partic. in Alzheimer's disease.

Advolval represent the peptine portions of the between amy stord modulator compounds of the invention. Beta-amyloid peptide is a 4 kilodalton peptide that is the major protein component of amyloid plaques are present both in the brain lesions, and in the walls of cerebral blood vessels in Alzheimer's disease patients. The mayloid modulators of the invention comprise an amyloidogenic protein or peptide (such as this sequence) coupled directly or indirectly to at least one modifying group. The modifying group is preferably a cyclic, heterocyclic, or polycyclic group, such as declaim, a cholanyl group, a biotin containing group, or a fluorescein containing group. These compounds then modulate the aggregation of these sequences to natural amyloid proteins or peptides when contacted with the natural amyloid proteins or peptides. The modulator compounds can be used in the treatment of disorders associated with amyloidosis, such as amyloid polymeuropathy, familial amyloid cardiac amyloidosis, speemic senile amyloidosis, scrapis, bovine spongiform encephalopathy (reutzfeldt-Jakob disease, adult-onset disolated cardiac amyloidosis, speemic senile amyloidosis, familial amyloid cardiac amyloidosis, speemic senile amyloidosis, and other types of amyloidosis. The modulators are also useful for the creatment of disorders associated with beta-amyloidosis, especially
                                                                                                                                                               Beta-amyloid; modulator; amyloid plaque; brain lesion; amyloidosis; cerebral blood vessel; Alzheimer's disease; amyloidogenic protein; familial amyloid polyneuropathy; familial amyloid cardiomyopathy; isolated cardiac amyloidosis; systemic senile amyloidosis; insulinoma; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; urticaria; adult-onset diabetes; familial Mediterranean fever; therapy; deafness; scrapie; familial amyloid nephropathy; hereditary cepebral haemorrhage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .. The bAP derivatives inhibit aggregation of amyloidogenic proteins and appliates, specifically bAP, and their neurotoxicity, so are useful for treating and preventing any disease involving amyloidosis, specifically Alzheimer's disease but also Down's syndrome, familial amyloid polyneuropathy or cardiomyopathy, bovine spongiform encephalopathy and creuzfeldet-Jakob disease. The bAP derivatives are also used to diagnose these diseases, in vitro or in vivo, by detecting binding of bAP to labelled bAP derivatives some bAP derivatives inhibit bAP aggregation element when the bAP is present in molar excess. The present sequence represents

Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore
                                                                                                                                                  Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a chemical compound or composition comprising a peptide with a beta strand forming section and associates with a target beta-strand formed by a separate peptide-containing molecule. The invention is useful for inhibiting or reversing the association of target beta-strand, formed by Alzhaimer's Abeta peptide into a beta-sheet or beta-fibre and the aggregation of proteins or

The present sequence is that of an all-D peptide suitable for use for preparing vaccines for preventing or treating Alzheimer's disease and coher amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AAB82622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues or non-amino acid candles synthesised from the unnatural D-configuration and non-self of tragments. Vaccines of the invention are produced using 'non-self' captides synthesised from the unnatural D-configuration and non-self of avoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein, eg. the beta-sheet region or at least 1 region of an amyloid-beta peptide, or thair immunogenic fragments protein conjugates, immunogenic derivative peptides and immunogenic peptidemimetics. Examples include all-D peptides and immunogenic peptidemimetics. Examples include all-D peptides and immunogenic peptides and beta applide and the all-D derivative peptides or in AAB83623-64. The vaccine ellicits a preferential TH-2 or TH-1 response, or preventing fibrillogenesis and associated cellular toxicity. The amyloid corresponding to related diseases, e.g. browine spongiform encephalitis, crelated diseases, e.g. bowine spongiform encephalitis, crelated diseases, e.g. button protein related diseases, e.g. browine spongiform encephalitis, chronic infection (e.g. tuberculosis) carchic infection (e.g. tuberculosis) carchici infection in long-term haemodialysis patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                                                                                                                                 Alzheimer's disease; amyloidosis; amyloid-related disease; vaccine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.

```
Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                  Alzheimer's disease; amyloidosis; amyloid-related disease; vaccine;
                                                   All-D peptide used in Alzheimer's disease vaccine.

The present sequence is that of an all-D peptide suitable for use in preparing vaccines for preventing or treating Alzheimer's disease and ther amyloid related disorders in humans. It is based on a portion of other amyloid related disorders in humans. It is based on a portion of cher amyloid related disorders in humans. It is based on a portion of inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues or non-amino acid residues with other amino acid residues or non-amino acid camino acid fragments. Vaccines of the invention acid residues or non-amino acid cayoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid-beta peptide, or their immunogenic ac fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidonimetics. Examples include all-D peptides and corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-13 and corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16

preparing vaccines for preventing or treating Alzheimer's disease and corporating vaccines for preventing or treating Alzheimer's disease and other amyloid related dispoters in humans. It is based on a portion of other amyloid-beta peptide (see AABB2622), and may be modified by removing or amyloid-beta peptide (see AABB2622), and may be modified by removing or inserting 1 or more amino acid residues with other amino acid residues or non-amino acid fragments. Vaccines of the invention are produced using 'non-self' captides synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of 'self' proteins. The all-D peptides need not be avoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with a gargeated to be operative or immunogenic. They preferably interact with a captides site region, the amyloid-beta peptide, or their immunogenic GAG-binding site region, the amyloid-beta peptide and the all-D peptides and corresponding to residues 1-2, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and corresponding to residues 1-2, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and corresponding to be localised amyloid-beta peptide and the all-D derivative peptides given the amyloid-beta peptide and sesociated cellular toxicity. The amyloid related diseases may be localised amyloidosis, e.g. diabetes type II, crlated diseases may be localised amyloidosis, e.g. diabetes type II, crlated diseases, scrapie, cerebral amyloid angiopathy, and cruchellular related diseases, scrapie, cerebral amyloidosis, expediated with

macroglobulinaemia-associated amyloidosis, primary localised cutaneous nodular amyloidosis associated with Sjogren's syndrome, reactive (secondary) amyloidosis, familial Mediterranean Fever and familial amyloidosis, familial and deaffness (Muckle-Wells syndrome), hereditary cerebral haemorrhage with amyloidosis of Icelandic type, amyloidosis associated with long term haemodiallysis, hereditary non-reuropathic systemic amyloidosis (fibrinosen-associated with III), familial amyloidosis of Finnish type, amyloidosis associated with computed for the thyroid, fibrinosen-associated hereditary renal amyloidosis. The compound is capable of altering and inhibiting betamyloidosis. The compound is capable of altering and inhibiting betamyloid protein (beta-AP) aggregation of natural amyloidogenic proteins or peptides when contacted with a molar excess amount of natural beta-APs relative to the modulator. This sequence represents a fragment of the relative to the modulator. This sequence represents a fragment of the long form of beta-amyloid used in the creation of an amyloid modulator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amyloid modulator compound useful for treatment of an amyloidogenic disease such as Alzheimer's disease comprises an aggregation core domain and a modifying group attached to it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Beta amyloid peptide; beta-AP; beta amyloid precursor protein; A-beta; APP-770; amyloid aggragation; amyloidogenic; Alsheimer's disease; noctropic; amyloid aggragation; amunosuppressive; antimicrobial; auditory; antidiabetic; antipyretic; dermatological; cardiovascular; nephrotropic; amyloid aggregation inhibitor; neurotoxicity inhibitor; neurotoxicity inhibitor; Down's syndrome; amyloidogenic disease; beta amyloid deposition; amyloidosis; hereditary cerebral haemorrhage; familial amyloid polyneuropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an amyloid modulator compound (I) comprising an aggregation core domain and a modifying group attached to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

antidiabetic, antipyretic, dermatological, cardiovasciular, nephrotropic and auditory activities, and can be used as a natural amyloid aggregation inhibitor and an neurotoxicity inhibitor of natural beta amyloid aggregation conhibitor and a neurotoxicity inhibitor of natural beta amyloid aggregation inhibitor and a neurotoxicity inhibitor of a medicament for the diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's clience of diagnosis and other clinical occurrences of beta amyloid deposition such as manyloidosis, and for treating a disorder associated with hammorrhage with amyloidosis, and for treating a disorder associated with amyloidosis such as familial amyloid polyneuropathy. (1) reduces the tornic of neurotoxic aggregates to cultured neuronal cells. (1) not only reduce the formation of neurotoxic aggregates but also have the present sequence represents a beta-AP peptider of A-beta fibrils. The present sequence represents a beta-AP peptide, which is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                                                                                                                                                                                                                                        Gaps

```

The invention relates to an amyloid-targeting imaging agent comprising an

```
cc amyloid targeting moiety, a linker moiety and a labelling moiety. The agent is of general formula A.t.(A.l.n.k) z.A.l.a.b (I) where z = 0 - 1; cc a labelling moiety. Also included are I maging amyloid deposition or diagnosing an amyloid targeting moiety, Also included are I maging amyloid deposition or diagnosing an amyloid-related condition in a patient involving condition and mayloid-related condition in a patient involving in the patient, and ultrasound imaging (I) to the patient, and ultrasound imaging (I) in the patient, a buffering agent, a ranschelating agent, and a kit for preparing a radiopharmaceutical preparation comprising (I), a reducing agent, a buffering agent, a transchelating agent, and instructions for the preparation and use of the radiopharmaceutical in instructions for the preparation and use of the radiopharmaceutical in the imaging of amyloid deposition and for diagnosing an amyloid related condition. The agents are condition e.g. Creutzfeldt-Jakob disease (CDD), kuru, transmissible condition e.g. Creutzfeldt-Jakob disease (CDD), kuru, transmissible conditions in the imaging of amyloid seposition and for diagnosing an amyloid related condition conditions in filammation—associated amyloid, type II diabetes, primary amyloidosis, feline spongiform encephalopathy, non-transmissible creebral amyloidosis, light chain-related amyloidosis, persent sequence is a peptide forming the amyloid targeting moiety of the apart of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Amyloid; imaging agent; Creutzfeldt-Jakob disease; Kuru; CJD; transmissible cerebral amyloidosis; transmissible virus dementia; scrapie; transmissible mink encephalopathy; BSE; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloid; primary amyloidosis; feline spongiform encephalopathy; Alzheimer's disease; prion-mediated disease; blood-brain barrier; dialysis-related amyloidosis; light chain-related amyloidosis;

                                                                                                          The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The cagent is of general formula At-(Allnk) z-Allab(11 where z = 0 - 1; At = an amyloid targeting moiety. All n k = a linker moiety; and Allab college are labelling moiety. Also included are imaging amyloid deposition or diagnosing an amyloid-related condition in a patient involving administering (I) to the patient, and ultrasound imaging (I) in the patient to determine the presence of amyloid or amyloid-related condition comprising (I), and a kit for preparing a radiopharmaceutical preparation comprising (I), and a kit for preparation and use of the radiopharmaceutical in the imaging of amyloid deposition and use of the radiopharmaceutical in the imaging of amyloid deposition and for diagnosing an amyloid condition e.g. Creutzfeldt-Jakob disease (CDD), kuru, transmissible condition e.g. Creutzfeldt-Jakob disease (CDD), kuru, transmissible condition e.g. Creutzfeldt-Jakob disease (CDD), kuru, transmissible condition e.g. creebral amyloidoses (transmissible virus dementias), familial CDD, creebral amyloidosis, feline spongiform encephalopathy, non-transmissible creebral amyloidosis, feline spongiform encephalopathy, non-transmissible conditions and are capable of thiding specifically to amyloid spaques. The parsier and are capable of binding specifically to amyloid plaques. The present sequence is a peptide forming the amyloid targeting molety of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                 New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Amyloid; imaging agent; Creutzfeldt-Jakob disease; Kuru; CJD; transmissible cerebral amyloidosis; transmissible virus dementia; scrapie; transmissible winn dementia; scrapie; transmissible mink encephalopathy; BEE; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloid; primary amyloidosis; feline spongiform encephalopathy; allaheimer, disease; prion-mediated disease; blood-brain barrier, dialysis-related amyloidosis; light chain-related amyloidosis; erebral amyloid angiopathy.

The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The cagent is of general formula A.t. (A.l.n.k) z-A.l.a.b. [1] where z = 0 - 1; A.t. = an amyloid targeting moiety. Also included are linker moiety; and A.l.a.b. c. al labelling moiety. Also included are linging amyloid deposition or diagnosing an amyloid-related condition in a patient involving commistering (I) to the patient, and ultrasound imaging (I) in the patient to determine the presence of amyloid or amyloid-related condition; and a kit for preparing a radiopharmaceutical preparation comprising (I), and a kit for preparation and use of the radiopharmaceutical in the imaging of amyloid or amyloid-related condition. The agent are instructions for the preparation and use of the radiopharmaceutical in the imaging of amyloid deposition and for diagnosing an amyloid related condition e.g. Creutzfldt-Jakob disease (CDD), kuru, transmissible condition e.g. Creutzfldt-Jakob disease (CDD), kuru, transmissible creebral amyloidoses (transmissible virus dementias), familial CD, scrapie, transmissible mink encephalopathy, bovine spongiform encephalopathy, non-transmissible creebral amyloidosis, feline spongiform encephalopathy, non-transmissible creabral amyloidosis, light chain-related amyloidosis, cerebral camyloidosis, light chain-related amyloidosis, cerebral camyloidosis, light chain-related amyloidosis, cerebral cample of binding specifically to amyloid plaques. The barrier and are capable of binding specifically to amyloid plaques. The barrier and are capable of binding specifically to amyloid plaques. The barrier and are capable of binding specifically to amyloid plaques. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                 The present invention describes a novel peptide compound comprising Lys-
His-Tyr-beta-alaine, which has a memory modulating effect. The peptide
this-Tyr-beta-alaine, which has a memory modulating effect. The peptide
that notropic activity. The peptide can be used for the development of
topographic models useful to design and synthesise memory-enhancing and
tife-quality improving substances. The peptide compound restores the
life-quality improving substances. The peptide compound restores the
balance between excitatory and inhibitory systems in the brain, which is
cequired for optimal acquisition and retention of learning and helps to
correct defects in the balance that arise as a result of aging,
correct and injury. The substances exert recybernaticising effects on
infections and injury. The substances exert recybernaticising effects on
correct beptide structures. The substances mimic the action of
active peptides without having a peptide structure and do not subject to
degradation of peptide-splitting enzymes in the gut or other tissues. The
present sequence represents a human amyloid beta protein (beta-A4)

present sequence represents a human amyloid beta protein (beta-A4)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide #18, used as carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                                                                                                                                                      New peptide compound useful for design of substances that enhance memory.

The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzhimier's disease, hereditary cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11669, AAU11910 & AAU111911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid angiopathy (CAA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid haemorrhage for treating disease states characterised by cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU1669, AAU1911) that were used in the invention as a was used in the invention to treat a disease state characterised by cerebral myloid angiopathy (CAA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                                                                                      Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                          Peptide #19, used as carrier for the amyloid-beta40 (Abeta40) inhibitor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D amyloid-beta peptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and favours the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic inflammatory diseases e.g. rheumatoid arthritis, portable, syndrome and Crohn's Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's clicers, chronic pyplonephitis, postables, bronchiectasis, decubitus infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus certain malignant neoplasms can also result in AA fibril amyloid deposits including Hodgkin's lymphoma, renal carcinoma and hairy cell leukaemia. The

The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D amyloid-beta peptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and cavours the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy.

Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's disease. AA deposits are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus) ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis; cerebral amyloid angiopathy; amyloid disease; bechet's syndrome; psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome; Crohn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic; chronic pyelonephritis; osteomyelitis; Whipple's disease; vasotropic; Hodgkin's lymphoma; neuroprotective; bronchiectasis; ophthalmological; ulcer; antiinflammatory; cytostatic; uropathic; therapy.

The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and favours the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic attrictis, ankylosing spondylitis, psoriaais, psoriatic arthropathy. Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's disease. AA deposits are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
Certain malignant neoplasms can also result in AA fibril amyloid deposits including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis; psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome; Crohn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic; chronic pyelonephritis; ostcomyelltis; Whipple's disease; vasotropic; Hodgkin's lymphoma; neuroprotective; bronchiectasis; ophthalmological; ulcer; antiinflammatory; cytostatic; uropathic; therapy.

Also described: (I) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising the vector of (2); (4) preparing (I), comprising colluting the host cell of (3) under conditions that allow synthesis of (I) and recovering (I) from the culture; (5) a composition comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I),
ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease). Certain malignant neoplasms can also result in AA fibril amyloid deposits including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal call carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Albahmer's disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; hardated dementia; amyotrophic lateral sclerosis; neuronal disorder; aging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           regions of

cc nucleic acid of (1), vector of (2) or host cell of (3); (7) optimising caping the resulting Pab optimised clones; (10) expressing against Abeta4; (9) identifying optimised clones; (10) expressing composition, comprising otherwised clones; (11) preparing a pharmaceutical composition of (1), and formulating the composition, comprising optimised on (11) and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition prepared by method (8). (I) has controprotective, nootropic and antibody method (8). (I) has controprotective, nootropic and antibody molecule (1), nucleic acid molecule, controprotective, nootropic and antibody molecule (1), nucleic acid molecule, controprotective, nootropic and antibody molecule (1), nucleic and molecule (1), nucleic acid molecule, controprotection and/or treatment of a disease associated with anyloid operation and/or treatment of a disease associated with anyloid plaque formation. The antibody molecule (1) anyloid plaque formation of passive immunisation of the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the deminia, Alzhainer's disease, motor neuropathy, Down's syndrome, contracted the Jacob disease, motor neuropathy, Down's syndrome, controprised by a social passive the dementia, anyloid plaque formation. In particular, the disease is creutzfeldt Jacob disease, hereditary cerebral haemorrange with amyloid subteral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antibody molecule capable of specifically recognizing two regions of
the beta-A4 peptide, useful for diagnosing, preventing or treating
diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer; 6 disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;

The present invention describes an antibody molecule (1) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Giu-Phe-Arg-His-Asp-CC amino acid sequence Val-His-His-Gia-Live-Val-Phe-Phe-Ala-Giu-Asp-Val-CC amino acid sequence Val-His-His-Gia-Live-Val-Phe-Phe-Ala-Giu-Asp-Val-CC (1) ADA89887 or its fragment. Also described: (1) a mucleic acid molecule coding (1); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of V2); (4) preparing (1), comprising (1) and recovering (1) from the culture; (5) a composition comprising (1), or an antibody molecule produced by method (4); (6) a kit comprising (1), or an antibody molecule produced by method (4); (6) a kit comprising (1), or an antibody molecule produced by method (4); (6) a kit comprising (1), or an antibody molecule produced by method (4); (6) a kit comprising (1), or an antibody molecule preparation (1), and formulating the resulting fab optimisation of (1), and formulating the composition, comprising optimisation of (1), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition, composition prepared by method (8). (1) has corrective, nootropic and antiparkinsonian activities, and can be considered in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with composition of the prevention and/or treatment of a disease associated with antibody molecule formation. The antibody molecule composition for the disease mentioned above. The antibody is used for the disintegration of beta-amyloid plaque formation. The parting a disapposition of the disease mentioned above. The antibody is used for the capanism of disease, harding or menopathy, Down's syndrome, contexted the disease mentioned above. The antibody is used for the capanism of disease, harding or neuronal disorders related to amyotrophic lateral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                             The present invention describes a method (M1) for controlling self-
assembly of self-assembling peptide-based structures by providing a
controlled environment and placing segments of beta-amyloids in the
controlled environment to generate a self-assembling structure. Also
described: (1) a method (M1a) for controlling self-assembly of peptide-
based structures comprising providing a controlled environment adapted to
redirect a self-assembly process, and generating a self-assembling
peptide-based structure
controlled environment; and (2) a self-assembling peptide in the
controlled environment; and (2) a self-assembling peptide in the
controlled environment; and (2) a self-assembling peptide amino
comprising beta-amyloid segments, optionally with a conservative amino
beta-amyloid. The method is useful in controlling the self-assembling peptide
self-assembling peptide-based structures. The self-assembling peptide
structures may be used in generating devices at a molecular level to
permit molecular-level probing. The present sequence represents a human
c beta-amyloid 16-22 amino acid sequence, which is used in the
exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                           Controlling self-assembly of peptide-based structures (e.g. nanotubes) comprises providing a controlled environment and placing segments of beta -amyloids in the controlled environment to generate a self-assembling

This invention relates to novel self-aggregating peptides that can be used for the diagnosis and treatment of amyloid-associated diseases.

Considerally, it refers to peptides, and antibodies directed diseases.

Consideration it refers to peptides, and antibodies directed disaggregate formed aggregates by competitive destabilisation.

Consideration of islet amyloid polypeptides (lappe) and for the inhibit the production of islet amyloid polypeptides (lappe) and for the inhibition of amyloidosis. As such they are useful for treating a variety of unrelated pathological conditions including type-II diabetes mellitus, and intiple myeloma, medullary carcinoma, nortic medical carcinoma, multiple myeloma, medullary carcinoma, aortic medical carcinoma.

Considerationally, they can be described as exhibiting activities such as antidiabetic, nootropic, neuroprotective and antiparkinsonian. This peptide sequence is a human medin peptide fragment (also known as milk at globule-EGF factor 8 protein, which is the main constituent of aortic medial amyloid deposits). This peptide sequence is a human calcitonin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                  New self-aggregating peptide useful for treating amyloid-associated diseases e.g., Alzheimer's disease, Parkinson's disease, hereditary icelandic syndrome, multiple myeloma, medullary carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

Patent No. 6319498
GENERAL INFORMATION:
APPLICANT: Findeis, Mark A. et al.
TITLE OF INVENTION: Modulators of Amyloid Aggregation NUMBER OF SEQUENCES: 45
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD, LLP
STRRET: 28 State Street
CITY: Boston
                                                                                                                                                                                                                                                                                                                                                  STATE: Mass.

Sequence 64, Application US/08766596A

Sequence 64, Application US/08766596A

Patent No. 6462171

GENERAL INFORMATION:

APPLICANT: SOTO-JARA, Claudio

APPLICANT: BAUMANN, Marc

APPLICANT: RAMGIONE, Blas

TITLE OF INVENTION: COMPOSITIONS THEREOF FOR TREATMENT OF DISORDERS OR DISEASES

TITLE OF INVENTION: ASSOCIATED WITH PROTEIN FOLDING INTO AMYLOID OR AMYLOID-LIKE

TITLE OF INVENTION: DEPOSITS

NUMBER OF SEQUENCES: 69

CORRESPONDENCE ADDRESS:

Sequence 21, Application US/09724961

Patent No. 6743427

GENERAL INFORMATION:

APPLICANT: Bard, Frederique

APPLICANT: Wasquez, Nicki

APPLICANT: Vadnock, Ted

TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease

TITLE OF INVENTION: Prevention

TITLE OF INVENTION: Prevention

CURRENT APPLICATION NUMBER: US/09/724,961

CURRENT APPLICATION NUMBER: US 09/580,015

PRIOR PILING DATE: 2000-05-26

PRIOR FILING DATE: 1999-05-28

PRIOR FILING DATE: 1998-11-30

PRIOR FILING DATE: 1998-11-30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Sequence 24, Application US/09580018
Patent No. 676188
GENERAL INFORMATION:
APPLICANT: Schenk Dale B.
APPLICANT: Bard, Frederique
APPLICANT: Vednock, Ted
TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease;
FILE REPRENCE: 152704-004760US
CURRENT APPLICATION NUMBER: US/09/580,018
CURRENT FILING DATE: 1000-05-26
PRIOR APPLICATION NUMBER: US 09/322,289
PRIOR FILING DATE: 1999-05-28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ; OTHER INFORMATION: Description of Artificial Sequence:10-mer peptide; OTHER INFORMATION: from AN1792 sequence (human Abeta42, beta-amyloid; OTHER INFORMATION: peptide)

Patent No. 5948763

GENERAL INFORMATION:
APPLICANT: SOTO-JARA, Claudio
APPLICANT: FANGIONE, BLAS
TITLE OF INVENTION: THEREOF FOR TREATMENT OF DISORDERS OR DISEASES ASSOCIATED
TITLE OF INVENTION: WITH PROTEIN FOLDING INTO AMYLOID OR AMYLOID-LIKE DEPOSITS
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
ADDRESSEE: BROWDY AND NEIMARK
                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                  Sequence 37, Application US/08612785B
Patent No. 5854204
GENERAL INFORMATION:
APPLICANT: Findeis, Mark A. et al.
TITLE OF INVENTION: Ab Peptides that Modulate b-Amyloid
TITLE OF INVENTION: Aggregation
NUMBER OF SEQUENCES: 40
CORRESPONDENCE ADDRESS:
ADDRESSE: LAHIVE & COCKFIELD
STREET: 28 State Street, Suite 510
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CITY: Boston
STATE: Massachusetts
COMTRY: Massachusetts
CONTRY: CONTRY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 48
US-08-617-267C-14
'Sequence 14, Application US/08617267C'
'Patent No. 6319498

Sequence 4, Application US/09747408

Patent No. 6670390

GENERAL INFORMATION:

APPLICANT: Green, Allan M.

TITLE OF INVENTION: Compounds And Methods For Modulating

TITLE OF INVENTION: Cerebral Amyloid Angiopathy

FILE REFERENCE: NBI-088

CURRENT APPLICATION NUMBER: US/09/747,408

CURRENT FILING DATE: 2000-12-22

PRIOR FILING DATE: 1999-12-23

NUMBER OF SEQ ID NOS: 24

SOFTWARE: PastSEQ for Windows Version 4.0

SEQ ID NA Length 6; Indels 100.0%; Score 31; DB 4; L nilarity 100.0%; Pred. No. 4.1e+05; Conservative 0; Mismatches 0; ORGANISM: Homo sapiens US-09-747-408-4 Query Match Best Local Similarity Matches 6; Conserv

APPLICANT: Homburger et al.
TILLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
TILLE OF INVENTION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 45548
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .
